1. Executive summary

Apex proposes a secure, extensible procurement analytics platform that consolidates supplier, contract, and spend data into a governed workspace. Our design supports the requested 1,200 users, existing identity provider, and staged expansion to additional business units. We understand the buyer requires implementation within six months, auditable access, and transparent total cost.

2. Proposed solution and delivery
A modular cloud architecture uses a managed data warehouse, an integration layer with documented REST APIs, and a role-based web application. The platform scales horizontally and supports SSO through SAML and OIDC.

Delivery is planned across 24 weeks: discovery (4 weeks), foundation and integrations (8 weeks), configuration and migration (6 weeks), acceptance and training (4 weeks), and production transition (2 weeks). A delivery lead, solution architect, two integration engineers, security lead, and change manager are assigned. Weekly governance tracks dependencies, decisions, and risks. The legacy ERP connector requires buyer test credentials by week 3.

3. Commercial, security, and support
Fixed implementation fee: $1,480,000. Annual subscription: $360,000 for up to 1,200 named users. Optional data migration beyond three source systems is time-and-materials at $220/hour. Taxes and buyer-provided cloud tenancy are excluded. Pricing is valid for 90 days.

Controls include AES-256 encryption at rest, TLS 1.2+ in transit, SSO, least-privilege role controls, immutable audit events, annual penetration testing, and documented incident response. Apex maintains ISO 27001 certification; the current certificate and scope can be provided during diligence. Customer data is hosted in the selected region and is not used to train shared models.

Support is 24x7 for critical incidents, with a 30-minute initial response target for severity 1. Standard support includes named service management, monthly service reviews, and quarterly release briefings. Apex has delivered comparable analytics programs for two large public-sector organizations; references are available with permission. The proposal assumes buyer SMEs are available for two workshops each week.
