1. Executive overview

Orbit Digital is pleased to propose its established insights platform for the buyer’s procurement transformation. We bring long experience helping complex organizations improve visibility and standardize reporting. The proposed service will give procurement leaders a consolidated view of suppliers and spend while supporting a measured rollout.

2. Platform and implementation

The Orbit Insights suite provides configurable dashboards, supplier profiles, scheduled reports, and data exports. It is designed for enterprise workloads and can be tailored to the buyer’s governance model. The proposal anticipates connection to the buyer’s existing systems; exact interface patterns and source-system sequencing will be agreed during discovery. A detailed integration inventory and dependency plan are not included at this stage.

The indicative schedule is 18 to 26 weeks depending on source-data readiness. Work proceeds through discovery, configuration, data loading, user review, and rollout. A senior engagement manager coordinates Orbit’s product specialists and the buyer’s team. Resource levels and acceptance measures will be finalized after a joint planning session.

3. Price, controls, and experience
Estimated first-year price is $970,000: $310,000 implementation and $660,000 annual platform subscription. The estimate assumes three standard data sources and excludes custom interfaces, extensive remediation, travel, and taxes. Final commercial terms follow discovery.

The platform supports encryption in transit and at rest, configurable user roles, and standard cloud security monitoring. Orbit maintains an information-security program and conducts periodic external testing. Specific certification evidence, audit retention periods, incident notification targets, and data residency commitments can be discussed during contracting; they are not committed in this response.

Orbit offers a 24x7 service desk for critical issues, a named customer success lead, and quarterly account reviews. Our teams have supported more than 30 enterprise analytics deployments across regulated and public-sector organizations. Three customer references are available, including two procurement transformation programs. Orbit’s account team has long-standing delivery relationships with several listed clients. The proposal is subject to final scoping and the buyer’s standard legal review.
